ABSTRACTED-PUB-NO: EP 552657A

BASIC-ABSTRACT:

Pure Boswellia acid, one of its physiologically acceptable salts, derivs. or salt of derivs. or a plant prepn. contg. boswellia acid can be used for the prophylaxis and/or therapy of inflammations caused by increased leukotriene formation in human and veterinary medicine.

USE/ADVANTAGE - The **boswellia** acid cpds. are esp. effective against diseases of

the joints (rheumatism), epidermal lesions (psoriasis), allergic and chronic asthma, endotoxin shock, inflammations of the intestines (colitis ulcerosa, Morbus Crohn) and chronic hepatitis. The boswellia acid cpds. selectively influence inflammations by inhibiting leukotriene synthesis. They can be used to replace steroidal antirheumatic drugs and can be used for prlonged periods without causing side effects, esp. the effects on the metabolic and hormone systems caused by steroidal antirheumatics. The boswellia acid prepns. can be taken intraperitoneally, orally, buccally, rectally, intramuscularly, topically, subcutaneously, intraarticularly or intravenously. IC50 values for 5-lipoxygenase are 5uM for beta-boswellia zcid, 11-keto-beta-boswellia acid and alpha-boswellia acid, 7 micro-M for acetyl-boswellia acid and acetyl-alpha-boswellia acid and 2 micro-M for acetyl-11-keto-beta-boswellia acid
